

MOHAMED ALI GHARSELLAOUI

SENIOR FULL STACK DEVELOPER

 **Email** medali.gharsellaoui@gmail.com  **Linkedin** [Mohamed Ali Gharsellaoui](#)  **Phone** +216 20 319 189

Full-stack Software Engineer with 5+ years of experience developing web applications, specializing in frontend architecture and user experience. Skilled in building complex and scalable interfaces with TypeScript, Vue.js, and React, while contributing to backend development with Node.js, Java. I enjoy solving challenging UI problems, improving application performance, and building maintainable solutions that make products easier and more enjoyable to use.

Experience

● iObeya

Full stack developer

September 2022 – Present

- Designed and delivered complex features for iObeya's enterprise visual collaboration platform, improving the user experience across interactive workspaces used by enterprise customers.
- Helped evolve to a micro-frontend architecture using **Single-SPA**, enabling modular development, independent deployments, and better separation between application domains.
- Designed and implemented scalable frontend features using **Vue.js**, company's design system and reusable composables, improving consistency, maintainability, and long-term scalability.
- Leveraged AI-assisted development tools (Claude Code, GitHub Copilot) to accelerate debugging, architecture exploration, documentation, and feature implementation while maintaining high code quality through testing and peer review.
- Developed an AI-powered Merge Request reviewer that analyzed code changes, suggested improvements, and generated review feedback, reducing manual review effort.
- Designed and implemented advanced features for Mural view, enabling users to organize rooms, categories, and boards through an interactive grid interface with complex drag-and-drop behaviors.
- Extended and customized **GridStack** layout engine by implementing a point-and-click placement alongside drag-and-drop interactions, resolving cross-device interaction challenges.
- Designed and implemented Mosaic view by developing layout algorithms that calculated positioning, scaling, and rendering of boards and categories to provide an optimized overview of the room.
- Played a key role in migrating application state management from **Vuex** to **Pinia**, simplifying architecture, improving maintainability, and reducing bundle size.
- Contributed to **Pixi.js** integration within boards to improve zoom experience and visual interactions.
- Improved product quality by implementing automated end-to-end testing with Playwright, performance testing with K6, and unit testing.
- Reviewed code, presented technical topics during Frontend Guild sessions, shared architectural best practices, and regularly demonstrated delivered features to product managers to align technical solutions with business needs.
- Developed backend features using **Spring Boot** by implementing REST APIs and integrations supporting collaborative platform workflows.
- Partnered with cross-functional teams to establish development best practices, and continuously improve the platform architecture.

● WELYNE

Full stack developer

March 2022 – September 2022

- Developed full-stack apps across multiple domains, including ERP, mobile applications, and business management solutions.
- Built IMSG-ERP, a university ERP platform using **Angular** and Laravel, implementing frontend features and backend services to support academic management workflows.
- Contributed to Shopvel, a mobile application using **Node.js**, designing the database structure and handling application containerization with **Docker**.
- Optimized and maintained BlancLiving App using **Angular** and **Laravel**, improving existing features and fixing issues.
- Collaborated with clients to analyze requirements, propose technical solutions, and align application features with business objectives.

● ASM – ALL SOFT MULTIMEDIA

Full stack developer

July 2021 – March 2022

- Built and maintained DUX-ERP, an enterprise resource planning solution using **Angular** and **Laravel**, contributing to frontend features, backend services, and application evolution.
- Designed and implemented an interactive Kanban module with drag-and-drop functionality, improving task organization and workflow visualization.
- Transformed operational data into actionable insights for administrators by building interactive reporting dashboards with **Chart.js**.
- Designed and implemented an employee time tracking module within DUX-ERP, including dedicated interfaces and business workflows to manage working hours and improve operational monitoring.
- Built dedicated mobile interfaces within the web app with optimized workflows and tailored user experiences adapted to different devices.
- Delivered continuous improvements, bug fixes, and custom solutions based on client requirements to enhance app stability and efficiency.

Skills

Frontend development : VueJs, TypeScript, JavaScript, React, Angular, Responsive Design, Design Systems

State management and build : Vuex, Pinia, Vite, Webpack

Backend development: Node.Js, Java, Spring Boot, Node.js, Laravel, REST APIs

AI Tools : Claude code, Github Copilot

Testing & Quality: Playwright E2E, K6 performance, Unit Tests (Vite, Jest)

DevOps & Cloud: Docker, Git, CI/CD, Linux, AWS

Methodologies: Agile, Scrum, Continuous Improvement

Projects

DoctorMe – AI Powered Healthcare Platform

- Led the development of a full-stack healthcare platform using Vue.js, Node.js, Express.js, and PostgreSQL, enabling secure patient, doctor, and administrator workflows.
- Designed and implemented RESTful APIs with Express.js and PostgreSQL for appointment scheduling, electronic medical records, user management, and role-based access control using JWT authentication.
- Implemented a responsive frontend with Vue.js, Vue Router, and Pinia, delivering an intuitive interface for patients and healthcare providers.
- Integrated Ollama-hosted Large Language Models (LLMs) to provide AI-powered medical document analysis, contextual assistance, and intelligent healthcare recommendations.
- Designed a secure object storage solution with MinIO for managing medical records, prescriptions, and diagnostic reports, enabling secure scalable file storage and retrieval.
- Containerized the application using Docker and Docker Compose, orchestrating Vue.js, Node.js, PostgreSQL, MinIO, Ollama, Caddy, Prometheus, and Grafana services for a reproducible development and deployment environment.
- Implemented application monitoring with Prometheus and Grafana, providing real-time metrics, health monitoring, and performance visualization.
- Automated database backup workflows using scheduled Docker cron jobs.
- Optimized backend performance through efficient PostgreSQL indexing, modular API architecture, and reusable Vue components, improving scalability and maintainability.
- Leveraged AI-assisted development tools (ChatGPT and GitHub Copilot) to accelerate feature implementation, troubleshoot complex full-stack issues, and improve code quality while validating all AI-generated code through testing and code review.

Education

Engineering Degree Industrial Computing ENET'COM, TUNISIA 2017 – 2021

Preparatory Cycle (Math - Physics) IPEIS, TUNISIA 2014 – 2017

Bachelor in Mathematics 2013

Certifications

Lean Six Sigma White Belt Certification [Fichly]
